DISCUSSION:

The New Mexico Environment Department (NMED) used operational and regulatory history to develop a pre-CERCLIS screen for the Section 27 Mine site. The mine operated as a wet mine, with production of uranium from 1967 to 1980. Initial reclamation of the mine occurred in the late 1980's with approximately 15 acres of disturbed surface area remain unreclaimed.

Mine reclamation is being required pursuant to the New Mexico Mining Act, and investigation into the impacts from the discharge of mine water and solution mining is being required pursuant to the New Mexico Water Quality Control Commission regulations.

NMED recommended that no further action be taken under CERCLA at the Section 27 Mine site due to on-going remedial activities pursuant to New Mexico regulations. EPA concurs with this recommendation.
